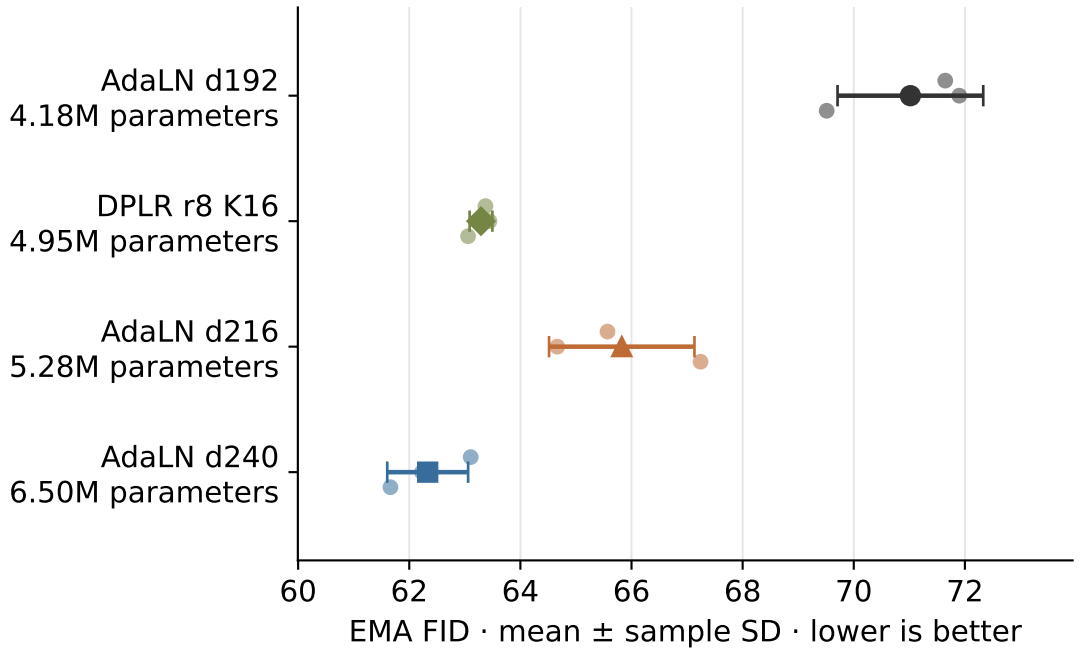
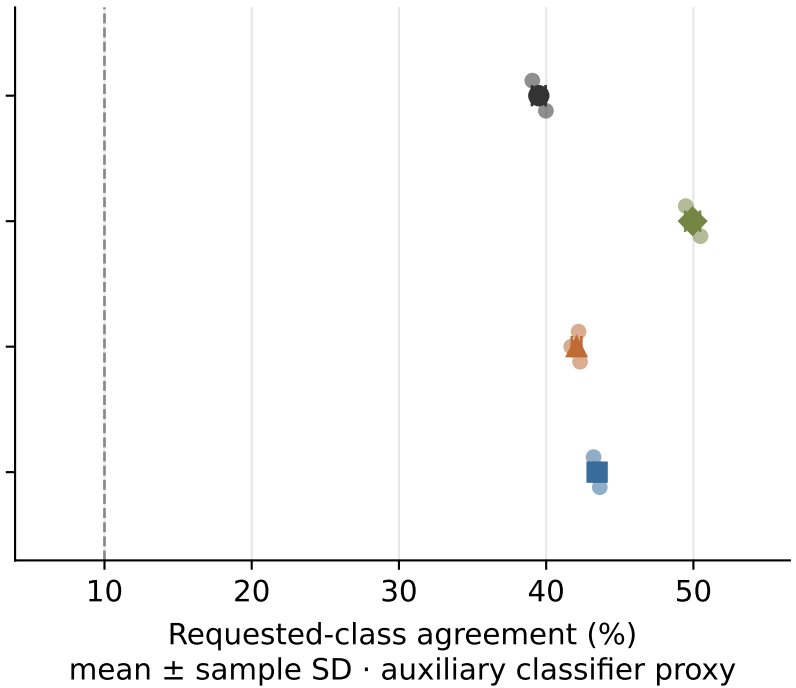
CIFAR-10 DiT · three-seed confirmation

30,000 steps · seeds 43–45 · settings frozen after tuning · 5,000 real / 5,000 generated images





Small points: individual training seeds. Intervals: sample SD, not confidence intervals. Official test untouched.

Classifier held-out accuracy: 80.72%. Agreement is limited by classifier errors and domain shift; dashed line: 10% chance.

Fixed DDIM-50 noise seed across runs; seed spread does not estimate sampling uncertainty or new-split generalization.
